HOLE FILLER DISCS

INSTRUCTIONS

The ADD2 discs are used to cover any hole opening in doors with holes under 1 1/2" in diameter. The overall discs dimension is 1 5/8" in diameter.

These discs are usually used to cover holes left from mortise/rim cylinders. The operation is simple!

First screw the furnished threaded rod into the blank disc. With the door cavity empty, place the blank disc with threaded rod into the outside of the door cylinder hole. With the spanner key SK1 inserted into the inside disc, thread and tighten inside disc completing the installation operation.
